Issue	Description
Connection from app to database	We tried our best to create a connection from the app to the database and small progresses were also achieved (login data were compared), but unfortunately it became so close beside the school stress that we focused on the workspace.
Create Json packet (App)	We were not able to create a Json package and send it on to the database, because we had a time stress towards the end.
Error messages (App)	Due to the bad database connection with the database, our data is not stored when logging in this leads to the fact that he does not throw an error message.
Downloading Report (Workspace)	Since we do not get any data from the database to the workspace, we cannot download any work reports.
Date from to (Workspace)	In the workspace it is not yet possible to output the hours for the selected data because we had not yet saved a date for each input of hours and the solution is therefore more trivial to be able to output the hours after all
