

# Manual for Workspace

<b>Project name</b>	<b>BauX</b>
<b>Project leader</b>	<b>Armin Hamzic</b>
<b>Project members</b>	<b>Pero Djukic Amin Taha</b>
<b>Version</b>	<b>2.0</b>
<b>Document state</b>	<b>In process</b>

# 1. Starting the Server

Install IntelliJ if it is not installed on your computer yet.

Open your IntelliJ and open the project called projekt.

Then click on the terminal.

Then write `cd db`.

Then search your programs for the Java folder.

When you have found it open your current JDK.

In jdk you go to the db folder.

From db to bin.

If you are in the bin search for the `startNetworkServer.bat`

Once you have found them, copy the path and paste it with e.g.

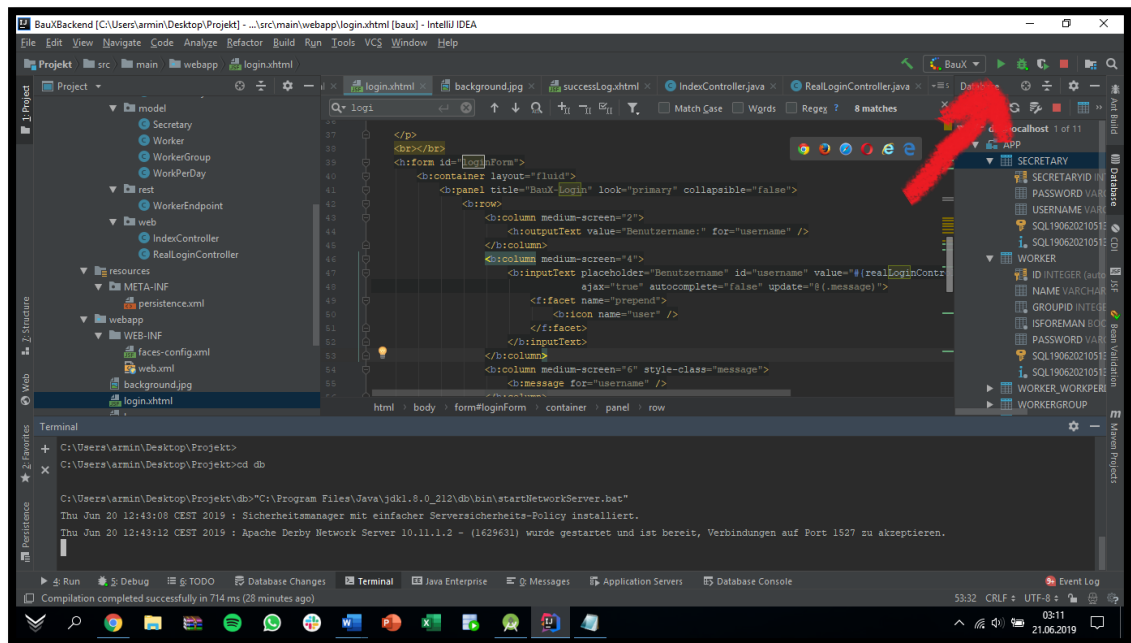

`"C:\Program Files\Java\jdk1.8.0_144\db\bin\startNetwork.bat"` and press enter.

If you did everything right, then this message will appear:

`"Apache Derby Network Server 10.11.1.2 - (1629631) wurde gestartet und ist bereit, Verbindungen auf Port 1527 zu akzeptieren"`

## 2. Get to the Workspace

The next thing after starting the server you will do, is to get to the workspace. To do this, you have to click on the start-button right on the top, then the Login Area will appear after your chrome-browser start automatically. If you are not using chrome, click edit configurations, then a window will pop up where you can select the browser you are using.

Now you should be in the Login-Area in your Browser.  
Now you can login with a Secretary-Account that is already stored in the Database.

Chosse on of these:

Username	Password
Martina Klein	martina
Tanja Groß	tanja
Daniela Frei	daniela
Sara Korb	sara

After the login you should be in the workspace.
